

## AMPLIACIÓN DE MATEMÁTICAS 2019-2020 TRABAJO PRÁCTICO 10: Grupos Abelianos

Demostrar que un grupo G es abeliano si, y sólo si, se tiene que Z(G) = G. Prueba que todo subgrupo de Z(G) es normal. Concluye que todos los subgrupos de un grupo abeliano son normales.

Vamos a denotar este por o(g). Demuestra que para todo  $r \in \mathbb{N}$  es

$$\pi \underbrace{o(g^r)}_{mcd(o(g),r)} = \pi \operatorname{cm}(o(g), \pi)$$

Calcula el orden de todos los elementos en  $\mathbb{Z}_n^*$  para los valores  $n \in \{4,13,25\}$ . ¿Son grupos cíclicos?  $\mathbb{S}_n$ Indica generadores para cada uno de estos grupos en caso afirmativo. onden 2: primo, todos

$$(g^{\pi})^m = g^{mcm(o(g), \pi)} = 1 \implies (salvo el neutro)$$

$$\frac{\pi}{\log |\pi \cdot n|} \Rightarrow mcm(o(q), \pi) |\pi \cdot n| \Rightarrow \sum_{n=1}^{\infty} m(n)$$

Poes 
$$g^{\pi,n} = (g^{\pi})_{ael}^{\pi} = 1$$

Zuego  $n = m$ 

Zuego  $n =$ 

cíclico es necesariamente abeliano.

Entonces tx, ye G; I nimelly +.q. X=qn; y=qm

Avego: 
$$X.y = (g^n) \cdot (g^m) = g^{n+m} = g^{m+n} = (g^m) \cdot (g^n) = y \cdot X$$

Zaboliano Ly Fabeliano

| sean finitos. ¿Son abelianos? ¿Y cíclicos?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
